

Axiomatics' range of simple, wireless beam counters are perfect to capture basic footfall trends and visitor data. With fast and easy installation, they are our most cost effective solution. Easy to relocate if needed, these counters all offer the opportunity to be re-used on different entrances. These counters operate on the principle of a beam break system, so that when the counter detects its infrared beam has been interrupted (eg, by a person walking through) it registers this as a count.

Micro People Counter

These sensors are our smallest, most discreet option. They are not bi-directional. Battery life of up to 1 year. Count data is viewed on a screen on the unit itself. Each system consists of a transmitter and receiver. Maximum span 5m.

People Counter Sensor with Display

This unit is larger and more powerful than the Micro Counter. These counters have bi-directional capability. Battery life of up to 1 year. Count data is viewed on a screen on the unit itself. Each system comes with a transmitter and receiver. A uni-directional version is available—these have an expected battery life of up to 4 years. Maximum span 10m

An IP54 weather-proof version is also available, for outdoor environments.

People Counter Sensor with USB

This unit counts bi-directionally, giving you both in and out counts. Expected battery life is up to 1 year. No on screen display as secure download of data onto USB stick. Each system consists of a transmitter and receiver. Maximum span 8m

A robust housing is available to help prevent tampering and protect the device from knocks.
